Documentation for AutoCAD is mostly contained in the AutoCAD User's Guide. The guide contains reference information on functions and topics as well as examples and typical applications. For more information on the user guide, see the article on the AutoCAD User's Guide. The most basic operations of AutoCAD begin with a few keystrokes. To draw a line, for example, the following process takes place: (1) click the cursor at the point where the line is to be drawn. (2) press the key combination Ctrl+arrow keys to move the cursor. (3) press the key combination ALT+D to begin drawing. (4) release the mouse button (the left button is typically used, though this varies between platforms) when the line is to be drawn. (5) press the key combination End to end the line. One of the great features of AutoCAD is that these basic operations are intuitive to almost any user. Once AutoCAD is familiar, using the software becomes a relatively simple matter of applying familiar patterns and techniques in new ways. Determining the key sequence to use for a certain operation is a fundamental problem when writing software for users. This problem is magnified when writing a software program for multiple platforms, like AutoCAD, because the user interface is different on each platform. For example, on a Microsoft Windows operating system, key combinations use the following commands: { command } /{ option } { key combination } { key combination } { key combination } This is similar to the Unix convention: { command } { key combination } { command } { key combination } { command } On a Mac OS, key combinations use a different syntax: { command } { key combination } { key combination } { command } In AutoCAD, key combinations are usually enclosed in single quotation marks, with the key combination on the same line as the command. For example: 'CTRL+arrow left' ALT+D'END' This is often enough information for a user to determine what the key sequence is, and it has the added advantage that the single quotation marks on each line are not distracting, as they are with the above Mac OS example. The and end quote symbols, of course, are not standard keystrokes. These two characters represent the Alt key and the Delete key
