Get to Work I Think I Attracted an Alien to My House and an Alien Just Went Poof?? libropdfprincipiosdeingenieriadelosbioprososdoran 4. Shortcuts have the same look and feel as the main menu, with a series of familiar icons on them: the library, the gallery, and so on. This design is far less counter-intuitive than changing your in-game look entirely.

. ' . . This is a bifolium of p. graecum... Q: Why "Choose a user" does not show in the "Share to"
option while using the default share template? I'm using the default share template and i created a
document library. I can see the share template dialog and i choose a user from the drop-down, but
when i press Share to, i just get the drop-down again without any options at all. How can i fix this?
A: In the default share template there is no "choose a user" Q: How to change the icon of a
QPushButton in Qt I'm trying to change the icon of a QPushButton, but it doesn't change. In the.ui
file, the button has the property "styleSheet" to specify the icon and if I change it in the.cpp file, it
does not change neither. Is there a solution to do that? Here is my code: QPushButton *button1 =
new QPushButton("Button", this); button1->setObjectName(QString("Button %1").arg(index));
