Big, large images, especially when printed, may benefit from special treatment, which is why we've included the "Image retouching" tools in Photoshop. These include:

- "Dodging," which "pulls" your subject out of the background,
- "Highlight," which "pulls" highlights out of the subject's face,
- "Red Eye Fix," which corrects faces with discolored, closed eyes, and
- "Smooth," which blends colors.

Even if you're working digitally, you may need to view a picture on a screen. We've included some photo retouching tools you might need for that. These include:

- "Adjust Color," which corrects for color balance
- "Adjust Exposure," which corrects for overexposure or underexposure
- "Adjust Shadows & Highlights," which correct for objects under or over-exposed,
- "Adjust White Balance," which alters the color of white objects, and.
- "Blur," which can make textures "pop" more.

If you're making a print or web design right away, it may be while you're shooting the picture that you don't have all the colors or effects you want. That's why we include the "Photo Filter" area of Photoshop. This area usually comes with the program with some pre-shopped filters, which you can open into your image. The Photoshop filters range from vignette, to black-and-white, to doodle, to clone, to retro slides, to distort, and to more. But it's your choice, of course.
