March of the Elves is an award-winning game from Mythic Portal based on the epic story of the Elf Queen's invasion of the mortal realm - A fairy tale epic that inspired the greatest generation of fantasy role-playing games! The first module of the best-selling series - Dark Elf Rage - features two epically themed adventures for players and characters alike. The module offers four short adventures for players to become renowned Heroes, including an encounter in the City of Sin - the City of Fallen Angels. The elf adventure begins with the arrival of a harpy and an elf princess who seeks retribution for the death of her parents, who died in the hands of a man the elves consider a traitor to their nation. To elvishly correct the situation, the elves call upon heroes to venture into the City of Fallen Angels. (PC and NPC Tokens for use in any fantasy setting or system from Mythic Portal) My Thoughts: I love the inclusion of the "Fallen Angels" expansion. It's great! A trip to the City of Sin, plus a small portion of the City of Angels. The building is a bit different, and the race of the rats is fun. I didn't love the enemies though, only because it seemed like they had a hard time damaging the players. It was a bit too powerful, but it still fit with the game. March of the Elves (1.4.7) [Official Site], is a free to play, open world role-playing game about Elves invading the world of Men. The elves are led by the powerful Elf Queen, who has been stranded in the mortal world, after being imprisoned for centuries. What's new in TRANCE VR:

Dear Players, We will be releasing a new Skins Pack for Transformer: Battle Universe (T:BU) later this month, that features all of the iconic characters from the Roboto Corporation in their first appearance. It's a fully unlocked skin pack that contains the following characters: As you might be aware by now, we have been working hard on the next major content update, which will arrive soon. Here is an update on our progress and feature roadmap (we would first like to apologize that we have had to be restricted to the earliest parts of development in order to maintain the good day to day process of such development; we do that above and beyond what any other company has to because we strive to make it a better day to day process for every one of our departments) for Update #11: Paint Shop We have changed and optimized the process to both localizing the appearance of the in-game spray paint into

each of the languages your players participate, and making it more reliable. As a result, we can now offer more accurate appearance to your characters using the guide we recently published. We believe this improves the overall gaming experience for you, the players, and while it may cost us some performance hit on the shipping side, we are confident it makes the process more reliable and ultimately leads to better experiences overall. We are excited to bring you the next part of the process to development for T:BU! Over a week ago we made the change to drop Support for Windows XP, to increase the compatibility with our infrastructure and production run. As a result, we have moved to WINDOWS 8 Pro, however we have yet to test any of the features T:BU has to offer on the new OS and will be doing so in the near future to make sure that any unforeseen compatibility issues don't show up (though, it is likely to add some lag to features that have been optimized to run on XP and clear any performance impact using newer processes; it's possible that it's more of the other way around, or both). The process of adapting and improving the Visible Tech for the Unity 4.1 version has taken longer than expected, and so we really need to check on that to make sure it is worth the lack of functionality. In reality this was expected as we found a fairly large bug that needed our attention with Unity because of configuration, and so even though it is a pain, this isn't actually out of our control. The good news is that
