In the 21st Century, few people remember the time before the 21st Century, when most people could only dream of living in a place where the sun shines constantly, and every day can be a holiday. That was when only a handful of people could afford to live in a place called the Golden Era. A man, namely, Dr. Edward Farkas, who was once a famous scientist in an equally famous and powerful organization started a company called Farkas Business Group one thousand years ago, based on the principle that could help mankind to live a free life, eventually, a more beautiful life. The company uses a technology of 'Utopia' which was created in the company to make every man, woman, and child a healthier and happier person. This technology has never been used up to now. However, after a long-lasting endeavor, scientists of Farkas Business Group have finally created a new product called "Farkas Quiz," which is used in schools. Also, Farkas himself told his staff in the company that he has invented a new "Utopia System" that is going to be launched in order to help mankind live a more beautiful life. The Farkas Quiz is a kind of application program that requires more than 10 hours to complete it. Besides, its system is so simple that a normal person could use it to see through someone's mind. Also, this system is capable of reading the thoughts and feelings of users using 'The Guardian' that is inside the brain, and then translate these thoughts and feelings into a series of grammatically correct words that users can understand. Even if you can think and feel in your heart, as long as you use the Farkas Quiz, even though you think and feel in your heart, you can read the thoughts and feelings of the user and translate it to words. Why is this Technology so Powerful? Even though this is a new form of 'Utopia' system developed by the Farkas company, many people think it is a new type of 'Utopia' product. Of course, it is not. This technology has been invented by Farkas, but it is not the technology of Farkas, rather it is a new form of 'Utopia' technology. In fact, it is a more powerful form of 'Utopia' technology. Compared with the Utopia System developed by the Farkas company, this technology is also more

What's new in Specular Stranded:

nodes - use mesh not plane Per Masked nodes, combined with per node Lights - create glowing effect. Tested with low poly meshes, like airbranes, snowboards, and curvic etc and was working great. It has to be combined with Anti-Aliasing, otherwise objects 'pop'. So now I need to combine these elements to make an environment which looks like this: I know there's got to be some way to do this with nodes, but I'm not finding anything. Cheers, Kiffy Quote: Originally posted by rubb: So now I need to combine these elements to make an environment which looks like this: It has to be combined with Anti-Aliasing, otherwise objects 'pop'. What about teh two componants of an environment in a plane divided, like you "answer & why" it. Embers and wood, or sand and water? The main issue I saw was "hidden" side faces, like in the mesh image. Because in the division process, the hidden side faces are thought as part of the faces of the top plane, that's why it joins more that the original Mesh. I implemented the algorithm in a similar way (using math.dist instead of LEasts Square Distance), but it doesn't really work... after a few texture distortions (at the beginning), then the result is in many cases worse than using one plane, with embers/water added manually. Polish try for embers.1 plane has embers on the edge, just a triplaned rectangle (to simplify the lighting), no texture on the node, use surface shader for shadow, embers, give surface a floor function, and subdiv+dilate(???) on the 'embers' plane (so the embers aren't connected). 2 planes have embers already on the edge, in such a way they are not connecting in one plane, you will have background embers(?) on another plane and embers in every edge. 3 planes have embers on the edge and halve embers (this also is a nice way to give embers on the diagonal). I also add an 'embers' in the top face in a way the embers won't link, because it is way easier to give embers on the edge and not have embers connecting on the top face. Then I
