NBP Lumizone Plugin For Photoshop Fixed

in addition to the lumizone panel, there is also an action. there are two versions of the action available, one with an option to use the single channel or the r, g, and b channels, and the second version is a single channel action. if you are a frequent user of the panels controls, there is an additional option to add a luminosity mask to the action. i have been using the action on my own images for a while now, and have noticed that my retouching time has gone down considerably. of course, this is not a replacement for using the controls in the lumizone panel, but it certainly helps. nbp.lumizone.1.0.001. plug-in for photoshop (freqsep control). this plugin will create luminosity masks for various frequencies in a photo. it can be used as a standalone program. the freqsep control plug-in is designed to replace photoshop's own lumizone plug-in. nbp.freqsep.control.1.001. plug-in for photoshop (freqsep control). this plugin will create luminosity masks for various frequencies in a photo. it can be used as a standalone program. the freqsep control plug-in is designed to replace photoshop's own lumizone plug-in. if you are familiar with the process of utilizing frequency separation in your retouching workflow, then you're probably familiar with the the channels palette from photoshop. i haven't been using the channels palette to maintain a luminosity mask, but i have been using the lumizone plugin before for this very reason. what i wanted to achieve was the ability to create multiple luminosity masks with frequency separation between them, and what i got was a creative plugin panel. i tested this plugin out earlier

this year when it was first released, and i've told the developer that i have a few recommendations, the most important of which is being able to adjust the frequency separation more easily. what i found was that you couldn't set up the frequency separation easily and it took a lot of trial and error to get the values that i wanted. this version (1.0.002) is much more streamlined and it takes a lot less effort to set up. this plugin is still in its testing stages, and i would not recommend using it until this has been further tested. i am looking forward to what nbp has to offer us in the future. i would recommend using the plugin to anyone who uses frequency separation in their retouching workflow.
