In Espire 1, players, as Operative, are tasked with infiltrating hostile territory, remaining unseen, and fulfilling their missions. This isn't as easy as it sounds, as the enemy is the only other person in VR. Operative is tasked with avoiding detection by constantly using their environmental knowledge of the landscape and their surroundings to their advantage. The game also offers players a variety of mechanics that makes it more than just a basic spy movie. Players can see their enemies in VR, with different visual choices for each enemy type and a variety of tools that allow Operative to be as stealthy or as violent as they would like. Also, players will be able to use various items to make their infiltration more efficient or to avoid detection. Features: - Stealth gameplay - 3 characters, each with unique looks, skills, and gameplay mechanics - Live-action VR, single-player missions with enemy AI - Variety of weapons and equipment Espire 1: VR Operative is a stealth spy game that takes place in VR. It is our VR E3 Gameplay Project and is aiming for a full production of a VR First-Person Stealth Action Spy Game! The core mechanics of Espire 1: VR Operative incorporate a variety of elements that keep the immersion going while helping to create suspense and tension. It is a game where you stay extremely stealthy and precise so that even the smallest mistakes are almost always fatal. We use "first person" in the singular sense, as we use full 360 degrees view and parallax on this game. "4th person" would be restrictive in terms of immersion, so we decided to go that way. Many third-person games have the player knowing exactly the actions of the characters, such as jumping, shooting, even talking. Espire 1 is all about solving puzzles and learning to interpret the environment in order to achieve your goals as the spy you are. We are very confident that the end result of this game will be one of the most immersive first-person stealth games we have seen. And if we achieve this, then we will certainly be the first in this genre. We are working hard on the game, and we hope you'll like it when it is finished and available on Steam. VR Spy comes to Steam Espire 1: VR Operative, the VR espionage game we made during E3 2018, is now available on Steam. From

for all players! ===== Emmanuel Sanders Is Five Times as Good as Jimmy Graham Emmanuel Sanders is a good wide receiver, Jimmy Graham is a good tight end. They also star in the same movie. However, according to an ESPN film crew, Sanders is on pace to have the best receivers' season and Graham to be the best tight end's in Ravens history. And both are guys who could be third-stringers in a lot of other NFL cities. "I think you can look at Jimmy Graham's career and other tight ends and say, they've been pretty good in the past," said a film crew member to NFL Films. "You look at Emmanuel Sanders and you look at that group, and I think you have one of the greatest (receiver) groups I think I've ever seen on that side of the ball," the same film crew member added. That, I assume, is a reference to Sanders' five touchdown catches and 10 receptions for 153 yards this year. It's the first time in the

**Warhammer Underworlds: Online - Warband: The Storm of Celestus** You can actually play tutorial missions against AI opponents very quickly. It may sound like this can get kind of repetitive but it's actually just an extension of the limited deck you'll unlock in the campaign. And you'll be using those decks in the campaign to handle the special challenges that come with each level. Best of all, the game's initial campaign will feature both a solo and multiplayer component, giving you the option to play the game simply for the campaign, or for multiplayer. Yori meets Han Solo on a remote moon during his investigations into the recent storm in a desperate attempt to save his kidnapped older brother. When one of their main contacts is captured by slavers, Tereshko and Yori must travel into the dark underbelly of a star system to rescue their friend and discover their own hidden past. Winner of the Seumas McNally Grand Prize in the 2013 Independent Games Festival, Warband: The Storm of Celestus has been selected as one of IGF 2013's 10 Honorable Mentions. 2 Comments Hello, I play the PC version of the game on a PS4 via Remote Play, without any issues. Sometimes the game starts running in a pause, so I managed to identify the problem: When the Campaign starts/resume the game is playing in stand alone mode and the first time it's pressing the right button on the Ps4 controller, the developers are sending the shift + right for the startup logo an the play button, while they should just press right and start playing. As soon as the devs fix this mismatch they will stop running in pause, or at least let the player to choose to pause when the issue is occurring. Note: I also had an issue with matching a remote controller after a reboot, that was solved deleting both the settings and input credentials. Otherwise it's a good game and I hope this more bugs get solved as soon as they appear. So there's a moment you can pause the game from the main menu but not the browser game? Here's how to handle that, I guess...you click the pause button on the main menu, the game resumes and then closes...and then you click the pause again and then the main menu comes back up and then the browser game does? I must have an issue with my set up or something...not sure...
