Offensive Security - Wireless Attacks - WiFu.pdf. Overview . November 16, 2019 06:42:04.806266069 CET, 58663, 53, 192.168.2.6, 8.8.8.8. A comment . I did not really understand how this picture can be used to assess vulnerability. To do this, there are two tables on the page that list the types of vulnerabilities, and you just need to choose from the list and see what kind of vulnerability is in your network. How can an attacker evaluate this? For example, we have an AES-CBC vulnerability in WPA2, for which it gives 1.5. But if we have an AES-CBC vulnerability in WPA2, but not 1 (and we may not use WPA2 at all), then this does not mean that we have something wrong.
